

Presentation and CV Daniel Jinnefält

My name is Daniel Jinnefält.

I was born in 1967 on the west coast of Sweden. I have a profound interest in health, outdoor activities, culture and literature. I have throughout my adult life been working in various parts of the world and to a major extent within international development, gender, pharmaceutical trade, health development and safe water.

In 1995 I started the company MediTec managing manufacturing, marketing, consultancy and international trade of pharmaceuticals and safe water products.

In 1999 I entered Lund University completing a Masters of Environmental Science and two Bachelors, in Social and Physical Geography, in 5 years, in Sweden, Australia and Africa, with the intention to understand social, cultural and financial factors of environmental and health security management on a global basis.

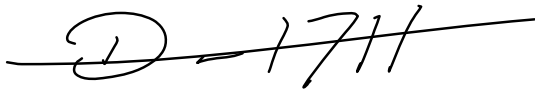

During my studies I was Head of the Lund University Nature Scientific Faculty Ambassadors and simultaneously I was involved in health and environmental development organizations being trusted representative at United Nation meetings.

In 2005, I was employed in international development as Project Manager at Scanagri/NIRAS, managing SIDA/EU projects. This same year I accepted the position as Program Manager at Human Health Development Foundation Zambia.

Since 2006 I have extended MediTec PurePharma International to Africa with the African central office in Kenya for EAC and with activities in Zambia and Ethiopia.

I am today engaged in health- and environmental development while the international arena has become a natural part of work and my full life.

Warm regards,
Daniel
